Subject: BFI Landfill - Re-introduction of Leachate into the Municipal Sewer System
Date: Tuesday, March 02, 2021 11:06:03 AM

To all:

As you are aware, BFI is continuing with their efforts to validate the efficacy of their revised operational process to re-introduce the discharge of un-treated leachate from the Landfill Site into the Municipal Sewer Collection System. The validation process must definitively prove that the risk to residents associated with the occurrence of another odor incident either within the neighborhood or their respective homes has been permanently eliminated. This directive has been clearly communicated in correspondence to your agencies beginning in September with Mayor Tamburro and continuing most recently with Mayor Dalina's January 26, 2021 letter to Commissioner LaTourette asking for *"an updated report regarding progress toward a final resolution to the underlying issues that created the odor problems in August/September 2020"*.

The Administration has now supplemented this request with a directive that prior to the Township allowing leachate to be re-introduced into the Municipal Sewer Collection System, the regulatory agencies must provide written confirmation to the Township of their approval of BFI's revised operational procedures and that these procedures when implemented, will eliminate any future risk to Township residents and employees from odors emanating from the Landfill Site.

If you have any questions or would like to discuss please advise.

Best regards,

Joe
